

Flow wraps and overwraps

Packaging solutions for the specific needs of medical and pharmaceutical products

Amcor has developed flow wraps and overwraps that meet the specific needs of medical and pharmaceutical products. They provide for instance exceptional barrier properties against light, oxygen, water vapor etc. Amcor's flow wraps and overwraps are also designed to meet unique needs such as grouping single packs or packaging refills for products that fit into devices, such as inhalers.

Features

- Large range of materials and combinations, including paper, aluminum, films, resins
- Unique platform of technologies: adhesive, heat or extrusion lamination, (co)extrusion coating
- Rotogravure/flexographic printing from small to large quantities
- Bag and pouch-making facilities

Key benefits

- Mid-to-high barrier protection against oxygen, moisture and light, adapted to your needs
- Puncture resistance
- Pack integrity (tamper evidence)
- Large printing surface for product recognition and regulatory information
- Optimal output on high speed, conventional or custom packaging equipment

Applications

Overwrapping, grouping of:

- Blister packs
- Inhalers
- Single dose packs such as eye wash vials
- Diagnostic kits, blood test strips
- Any pharmaceutical product or medical device currently packed on form fill seal flow wrap machines

Options

- Dessiflex™: integrated desiccant solution for advanced moisture protection
- Transparent high barrier laminates with Ceramis® proprietary films
- Child resistant options adapted to local/international regulations
- Easy-opening and peel-open solutions

Added value

- Regulatory and pharma GMP compliant
- Global network to offer continuity of supply
- Global R&D innovation centers
- Technical assistance
